DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1 and 2 are rejected under 35 U.S.C. 102(a) as being anticipated by McIntyre (USPN 5,752,115).

With regards to claim 1, McIntyre (USPN 5,752,115) teaches a sensor having a power input and an output for supplying a sensor output.

a controller (40;figure2) including;

a power supply switch for switching on or off a supply of electrical power to said sensor power input; (30;figure2) and

a control circuit for receiving and processing said sensor output and for turning off said power-supply switch in response to said control circuit accepting said sensor output from said sensor (40;figure2)

With regards to claim 2, McIntyre (USPN 5,752,115) teaches a light projection means (18;see figure 2), a driver circuit for supplying an emission signal to said light projection means (40;See figure 2) and a light receiving means for receiving light arising from light projected from said light projection means and wherein said controller starts acceptance of the sensor output from said sensor according to said emission signal.(20,24;figure 2)

Claim Objections

Claims 3 and 4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

During patent examination, the pending claims must be "given the broadest reasonable interpretation consistent with the specification." Applicant always has the opportunity to amend the claims during prosecution, and broad interpretation by the examiner reduces the possibility that the claim, once issued, will be interpreted more broadly than is justified. In re Prater, 415 F.2d 1393, 1404-05, 162 USPQ 541, 550-51 (CCPA 1969).

While the meaning of claims of issued patents are interpreted in light of the specification, prosecution history, prior art and other claims, this is not the mode of claim interpretation to be applied during examination. During examination, the claims must be interpreted as broadly as their terms reasonably allowed. This means that the words of the claim must be given their plain meaning unless applicant has provided a clear definition in the specification. In re Zletz, 893 F.2d 319, 321, 13 USPQ2d 1320, 1322 (Fed. Cir. 1989).

In this instance the switch controls the controller, which controls the distance beam sensor.
